

Reconditioning Services

In today's highly competitive energy market, power producers need to achieve peak performance while minimizing life cycle costs. PSM can help with a full spectrum of parts reconditioning services — all backed by PSM engineering, advanced technology and Alstom's global network. These state-of-the-art reconditioning services can extend the life of your components and optimize your maintenance budget.

PSM Reconditioning Services

- + Reconditioning of both OEM and PSM parts
- + New 76,000 sq. ft. facility in Florida serves customers in U.S.
- + Advanced F-Class process technologies:
CNC laser welding, High temperature diffusion brazing, Chemical stripping and APS/HVOF thermal spray coatings
- + Complete machine shop services:
CNC grinding, CNC milling, RAM EDM and CNC EDM hole drilling
- + Complete NDT and metallurgical services on site: FPI, Digital x-ray, CMM and Scanning Electron Microscopy
- + Full warehouse of spare and emergency parts

Reconditioning backed by engineers.

In our state-of-the-art reconditioning facility, design engineers work side-by-side with repair specialists to inspect and analyze both OEM and PSM engine-run parts. We utilize digital x-rays, coordinate measuring machines, non-destructive testing, and a fully equipped materials and testing lab. We determine the best method of repair and use the most advanced equipment to perform every operation — from laser welding and HVOF coating, to belting and finishing. And unlike any other reconditioning facility in the world, PSM allows you to take advantage of our patented new part design upgrades during repair — a unique combination that adds value to your parts and reduces your cost of operation.

Metallurgical Lab

The Reconditioning Process

The typical PSM reconditioning process consists of these steps:

Moment Weighing

Digital X-ray

Assessment

- + Visual Inspection
- + Metallurgical Investigation
- + Ultra-sonic Wall-thickness
- + Eddy Current
- + Thermography
- + Airflow
- + Fluorescent Penetrant Inspection (FPI)
- + Digital X-ray

Cleaning/Preparation

- + Sandblasting
- + Chemical/Acid Stripping
- + Salt Bath
- + Fluoride Ion Cleaning (FIC)
- + Ultrasonic Cleaning
- + Insert Removal

Repair

- + Belting/Finishing
- + Manual Welding
- + Laser Cladding
- + Diffusion Brazing
- + Heat Treatment
- + Honeycomb Replacement
- + Insert Replacement
- + Coupon Repair

Machine Shop Services

- + CNC Grinding
- + CNC Milling
- + RAM EDM
- + CNC EDM
- + Horizontal Milling

Coating

- + HVOF – MCrAl_y, CrC
- + APS – TBC, MCrAl_y
- + Internal Aluminide
- + Dual Wire Arc – Al Root Seal

Quality/Final Inspection

- + Reconditioning takes place in an ISO 9001:2000 and ISO 14001 certified environment. The entire reconditioning process is fully documented. This includes part identification numbers, details about each step in the process, relevant process specifications, any design upgrades, and a record of the quality checks performed after each stage.

Laser Weld

Coating

Local Repairs. Global network.

For customers in the United States, PSM conducts all reconditioning services in our new 76,000 sq. ft. facility in Jupiter, Florida. This facility is co-located with the new parts manufacturing business unit and allows close communication with the engineers that design and manufacture our advanced turbine parts. The PSM Repair Development Team is part of the Alstom worldwide reconditioning network and will leverage the latest process technologies and repair best practices to expedite the development process.

Reconditioning for a full range of parts.

Our reconditioning solutions will focus on F-Class technologies for both PSM and OEM gas turbine components and the product portfolio will include airfoils, combustion and fuel nozzles. Because of PSM's unique position as a comprehensive parts supplier for the F-Class, we can also provide a complete range of capital spares for your outage. The addition of the reconditioning facility will enhance PSM's portfolio which includes our new parts manufacturing, engineering/field services and our online engine monitoring capabilities.

Find out how PSM Reconditioning Services can add life and value to your parts. Call **561-354-1100** or email sales@psm.com
